

Florida Smart ID Verifier

(retailers, law enforcement and others)

Can I simply look at a Florida Smart ID user's smart device to verify their age or identity?

No. A Florida Smart ID is a secure, cryptographic credential, and not an image of the individual's driver license; therefore, a Florida Smart ID Verifier application will be required for law enforcement officers, retailers or other businesses wishing to accept the Florida Smart ID.

How will I use my Florida Smart ID Verifier?

Simply launch the Florida Smart ID Verifier application on the smart device, ask the customer to select the type of verification needed – age, proof of identity or law enforcement – and scan the code displayed on the customer's smart device. After the code is successfully scanned, the individual's information is displayed on the Florida Smart ID Verifier screen. Retailers will see a photo of the customer and confirmation that the customer is over age 18 or over age 21 on their device. Law enforcement will receive driver license information on their device.

How do I know the driver license information on a Florida Smart ID is accurate?

FLHSMV can update the Florida Smart ID remotely, whether to extend additional privileges, revoke privileges, or even remotely deactivate or wipe a person's credentials should their smart device be lost or stolen. Both the customer and the verifier will be able to see the date of the most recent update.

Is the Florida Smart ID as secure as a physical driver license?

A Florida Smart ID is far less susceptible to fraud than a standard physical driver license. It is protected by high-tech security features and thorough authentication not available on standard physical driver licenses. A Florida Smart ID provides the highest level of security in credential storage, data transmission and verification.

What information will retailers or law enforcement have access to when verifying my Florida Smart ID?

Businesses or law enforcement verifying a Florida Smart ID will only have access to driver license information an individual consents to share with them – and no other information or data from their smart device.

Will a retailer or law enforcement need to handle a user's smart device during the verification?

No. Florida Smart ID users will simply hold their smart device up so it can be verified by a retailer or by law enforcement, making it a contact-free and convenient way to show and verify age, identity or driving privileges.

Will the Florida Smart ID Verifier access other data from my smart device?

No. Only the data and information the user decides to share with a verifier will be accessible.

Will individuals need to carry also carry a traditional physical Florida driver license?

Yes. Florida law currently requires individuals to also carry the traditional physical Florida driver license.
